

# BITCOIN LIGHTNING BANK CASE STUDY

The Distributed Strategy

October 2025

## ABSTRACT

The Bitcoin Compound Annual Growth Rate (CAGR) was 76.93% over a 10-year timespan from January 1, 2015, to January 1, 2025. Institutions are investing into Bitcoin Exchange Traded Funds (ETFs) which shoulder all the Bitcoin volatility, while many corporations are implementing creative fundraising initiatives referred to as “accretive dilution” to sell shares and purchase Bitcoin for their Bitcoin Treasury. In August 2020, MicroStrategy (now Strategy) made news headlines of their Bitcoin accumulation initiative. In recent years, many Bitcoin Treasury Companies have followed in Strategy’s footsteps however they are all highly concentrated entities that use traditional financial products in traditional markets. Bitcoin Lightning Banks have a substantial competitive advantage to the industry by integrating all borrowing and lending products into the Bitcoin Layer 2 Lightning Network, which offers an open, global, and instantaneous settlement layer to provide superior yield while receiving revenue generating service fees. This case study shines a light on the massive potential that a Bitcoin Lightning Bank has when fusing Bitcoin and innovative Lightning Network technologies with traditional markets to challenge the status quo. Additional research and development are required to prove the feasibility of a Lightning Bank; however, I believe that it is not out of reach for those willing to put in the effort and resources.

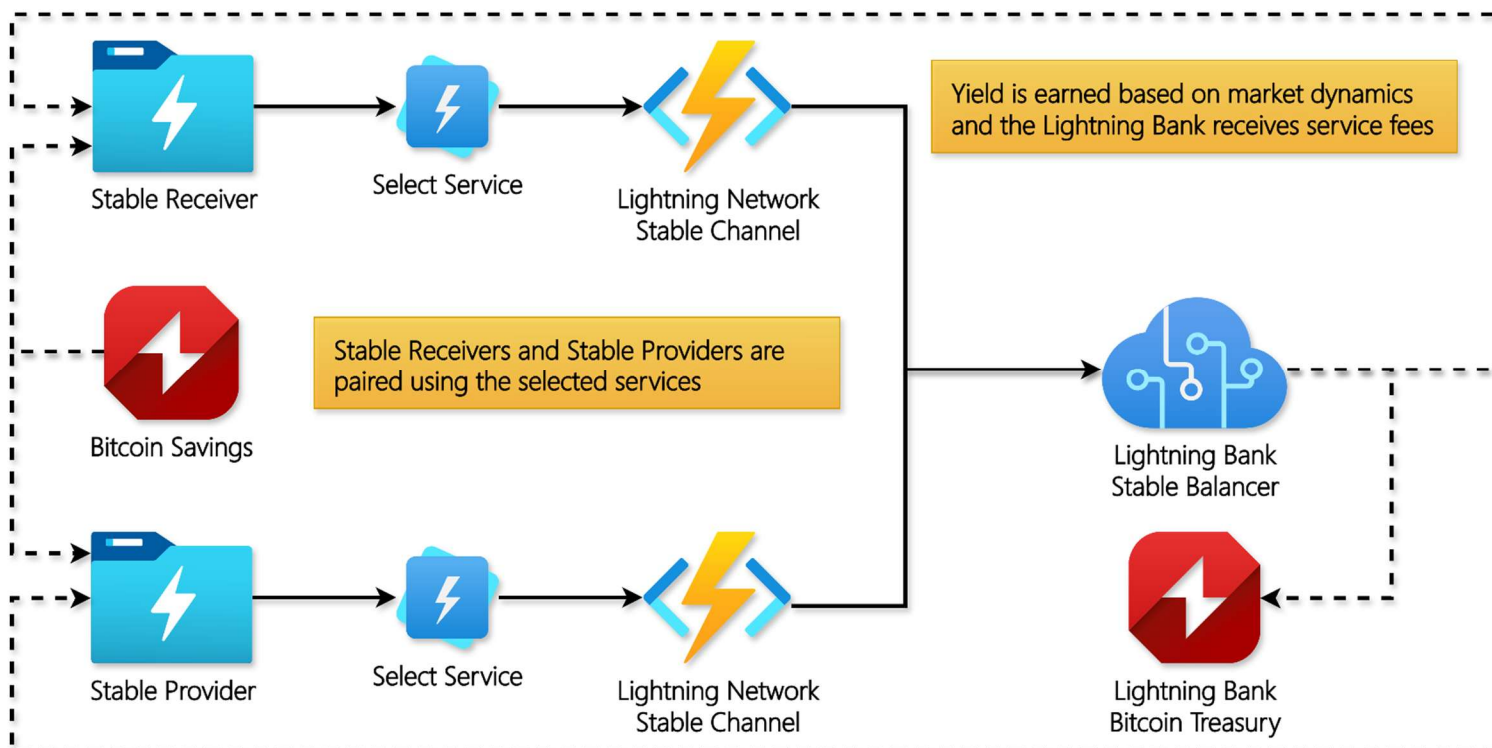

Kyle Hutchinson

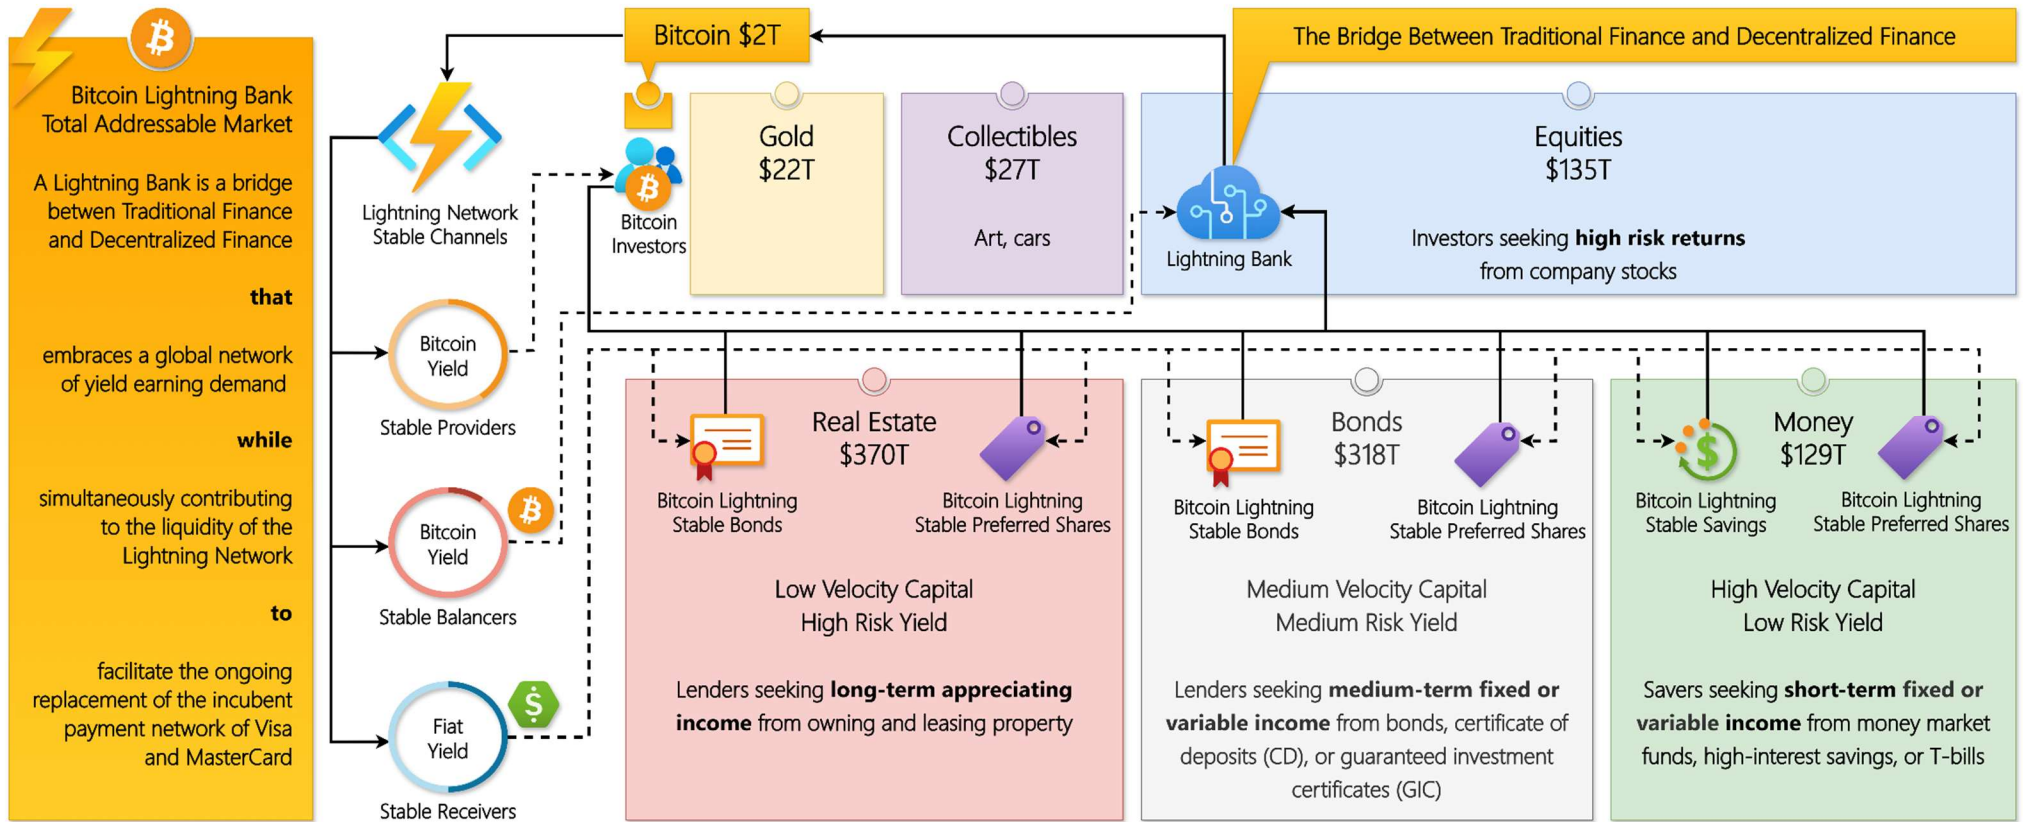

## Bitcoin Lightning Bank Overview and Features

Stable Receivers are Fiat Investors that Buy Bitcoin with Fiat Price Stability to Earn Yield

Stable Providers are Bitcoin Investors that 2X Long Bitcoin to Earn Yield

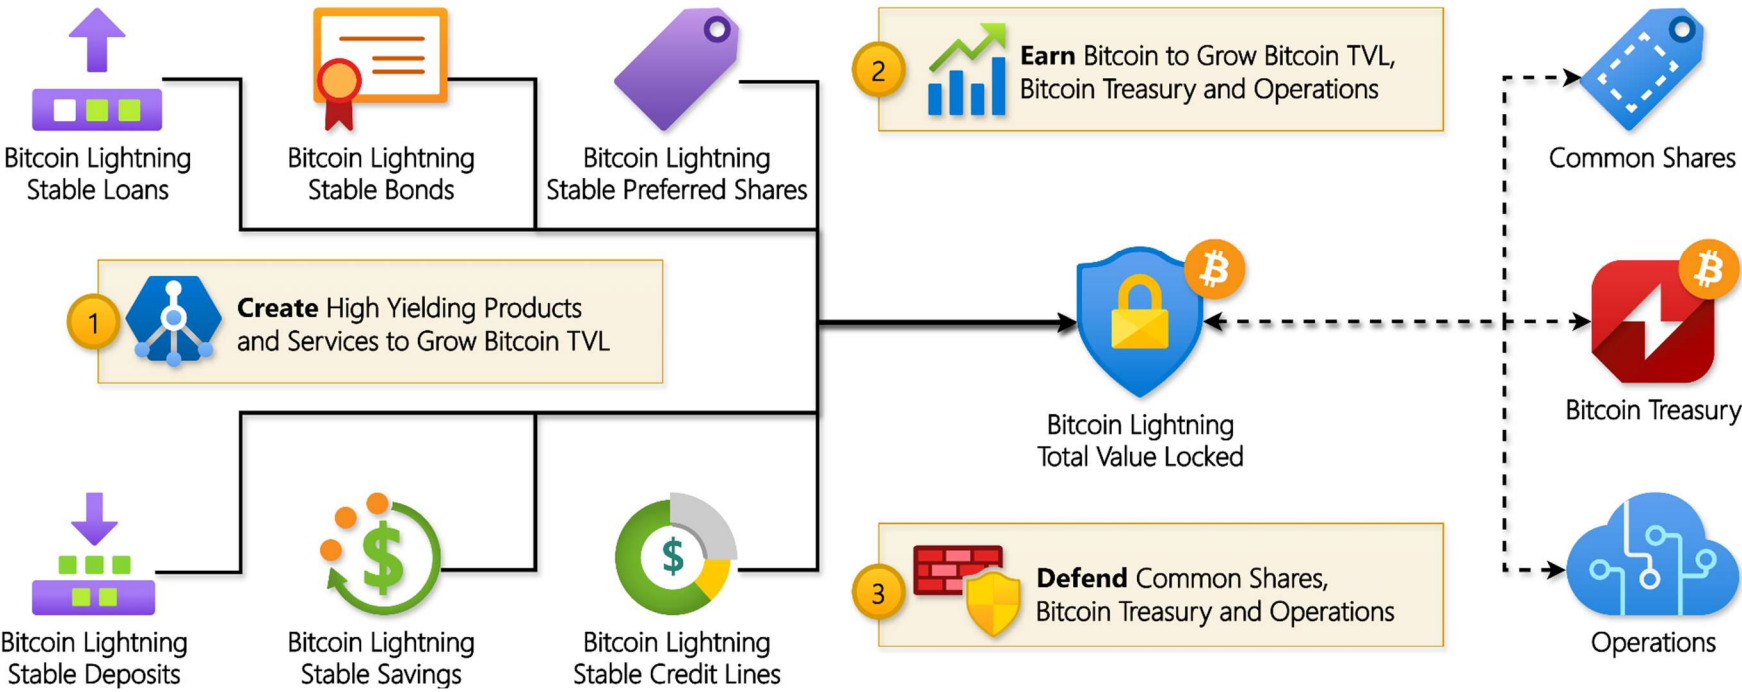

Feature Comparison	Bitcoin Treasury Companies and Bitcoin Banks	Bitcoin Lightning Banks	Bitcoin Lightning Stable Bonds	
Financial Products	Centralized Finance (CeFi)	Centralized and Decentralized Finance (CeFi & DeFi)	Flexible Rates	Fixed or variable rates based on percentage of stable Fiat or Bitcoin CAGR
Financial Rails	Traditional	Traditional and the Bitcoin Lightning Network		
Financial Management	Custodial	Custodial and non-custodial	Tax-Deductible	Interest payments are tax-deductible bank expenditures
Financial Markets	National market limitations	DeFi is globally accessible		
Interest Rate Makers	Company	DeFi is an open and free market	Securable	Bitcoin is stored in unique Stable Channels to extract yield
Bitcoin Participants	Company	Bank, Fiat Investors, and Bitcoin Investors		
Bitcoin Yield Distribution	<b>Concentration within Company</b>	<b>Distributed fairly between market participants</b>	Callable or Puttable	Early redemption option based on Bitcoin Growth Yield performance
Bitcoin Liquidation Risk	<b>Concentration within Company</b>	<b>Distributed between Stable Providers</b>		
Bitcoin Liquidation Priority	<b>Bond holders are paid first</b>	<b>Bank is paid first by liquidated Stable Providers</b>	Extendible	If Bitcoin underperforms then the bond can optionally be extended
Bitcoin Service Fees	<b>None</b>	<b>Bitcoin-denominated liquidity service fees</b>		
Bitcoin Strategy Tools	<b>Profit, Stock, Debt, and Bitcoin Treasury</b>	<b>Same + Bitcoin TVL to defend Bitcoin Treasury</b>	Non-Convertible	Share dilution is not necessary due to the superior yield
Bitcoin Total Value Locked Growth Rate	<b>CeFi = 1 Bitcoin buy adds 1 Bitcoin to BTC TVL 500K BTC buys 500K BTC TVL in Custody</b>	<b>DeFi = 1 Bitcoin buy adds 2 Bitcoin to BTC TVL 500K BTC buys 1M BTC TVL in Lightning Network</b>		

Use Cases		Centralized Finance (CeFi)	Decentralized Finance (DeFi)		
		Custodial	Non-Custodial Stable Receiver	Non-Custodial Stable Provider	Non-Custodial
Stable Channel	Stable Receiver	Lightning Bank	Fiat Investors	Lightning Bank	Fiat Investors
	Stable Provider	Lightning Bank	Lightning Bank	Bitcoin Investors	Bitcoin Investors
Lightning Bank	Goal	Store Bitcoin that was procured from liabilities (ex: bonds, preferred shares) into a Stable Receiver and/or Bitcoin Treasury into a Stable Provider then provide liquidity services to extract and distribute yield			Provide liquidity services to extract and distribute yield
Fiat Investor	Goal	Purchase TradFi products to earn interest or dividends	Self-custody Bitcoin in Stable Channel for greater control	<b>Purchase TradFi products to earn interest or dividends</b>	<b>Self-custody Bitcoin in Stable Channel for greater control</b>
	Risk	Low	Low	<b>Low</b>	<b>Low</b>
	Reward	High	High	<b>Maximum</b>	<b>Maximum</b>
Bitcoin Investor	Goal	Deposit Bitcoin to Lightning Bank to manage the Leverage Long Stable Channel while maintenance is required to avoid liquidation			<b>Self-custody Bitcoin in Leverage Long Stable Channel while maintenance is required to avoid liquidation</b>
	Risk	High	High	<b>High</b>	<b>High</b>
	Reward	High	High	<b>Maximum</b>	<b>Maximum</b>

Bitcoin Lightning Bank - The Proof of Work Bitcoin Strategy

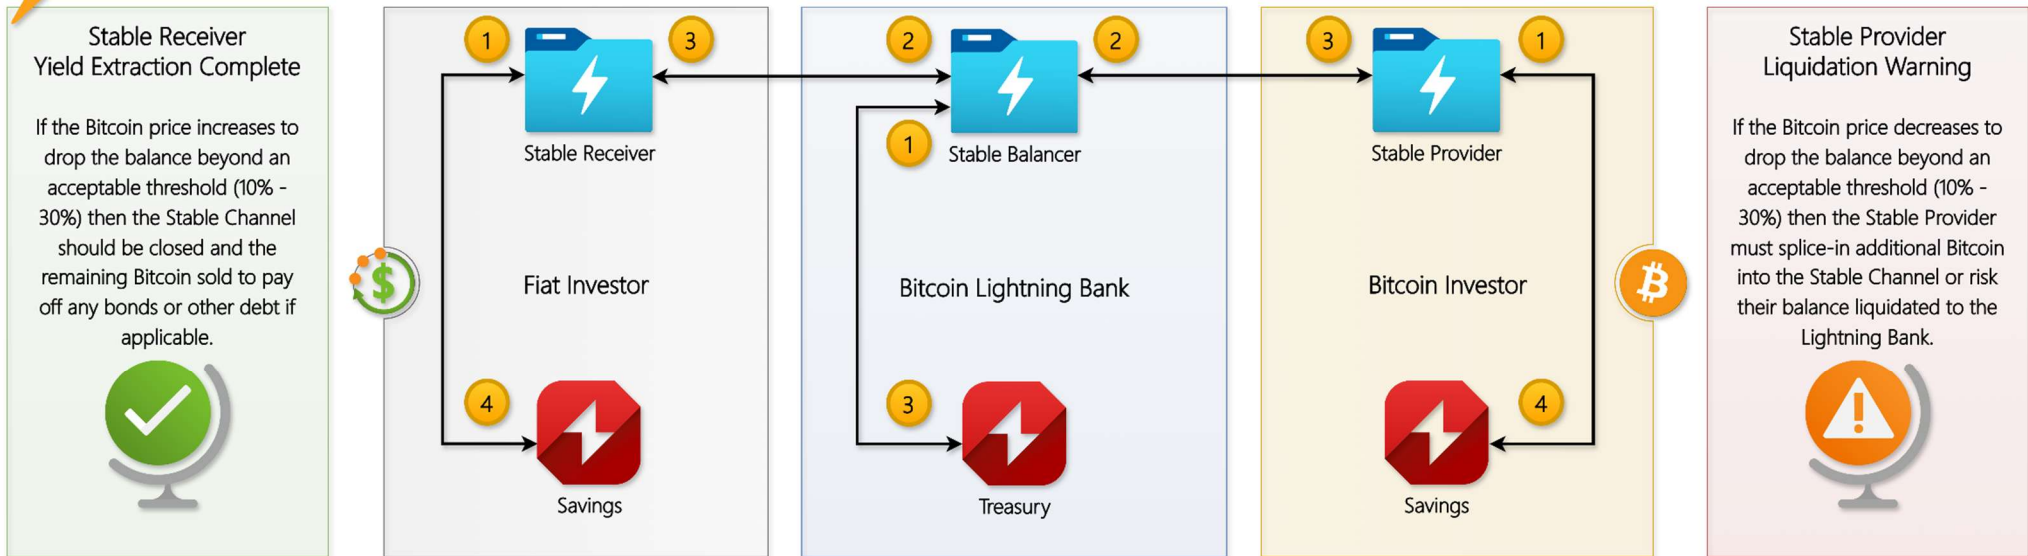

PoW Bitcoin Strategy	Create and Earn in Breadth	Defend in Depth
Bonds and Preferred Shares	Bank sells products to Fiat Investors then buys Bitcoin and deposits into a custodial portion of a Lightning Network Stable Channel to grow Bitcoin Lightning TVL and earn yield as a Stable Receiver. Bond interest or share dividend payments are covered by Stable Providers.	Mitigate risks by implementing market optimization techniques. If Bitcoin overperforms then the bank closes the Stable Channel and sells remaining Bitcoin to pay back the bond. If Bitcoin underperforms then the bank can either extend the bond or buy it out.
Savings and Deposits	Bank provides service for Fiat or Bitcoin Investors to deposit owned Bitcoin into a non-custodial or custodial portion of a Lightning Network Stable Channel to grow Bitcoin Lightning TVL and earn yield.	Mitigate risks during Bitcoin drawdowns by ensuring Bitcoin Investors either top-up their positions or face liquidation to the Bank
Loans and Credit Lines	Bitcoin Investors can use their custodial Bitcoin deposits as collateral for borrowing Bitcoin in a loan to be used for increased leverage or borrowing USAT / USDT in a credit line and interest fees are charged.	Mitigate risks by earning Bitcoin interest revenue from lending products
Total Value Locked	Bank enables custodial and non-custodial access to Lightning Network Stable Channels & Enterprise Channels to earn yield and grow Treasury or Operations.	Mitigate risks during Bitcoin drawdowns by ensuring Bitcoin Investors either top-up their positions or face liquidation to the Bank
Operations Revenue	Bank earns Lightning Network node operation revenue.	Mitigate risks by earning Bitcoin routing and liquidity management revenue
Common Shares	Bank sells Common Shares to buy Bitcoin and grow Treasury or Operations.	<b>Share dilution is protected by above practices if done efficiently</b>
Bitcoin Treasury	Bank can deposit Bitcoin Treasury into the Bitcoin Lightning TVL to earn yield.	<b>Treasury liquidation is protected by above practices if done efficiently</b>

## Bitcoin Lightning Bank - Stable Channel Life Cycle

The Lightning Bank Stable Balancer is an intelligent automated market maker (AMM) that maintains a liquidity pool to splice in and out of the Lightning Channels between a Stable Receiver and Stable Provider so that the Stable Receiver has a guaranteed stable Fiat balance backed by Bitcoin.

Stable Channel Life Cycle		Description
1	Start or Splice-In Stable Channel	Stable Receiver, Stable Balancer, and Stable Provider add Bitcoin into the Lightning Channel to either initiate the connection or keep it active and just splice-in liquidity.
2	Upon Bitcoin Price Movement, Send Bitcoin to Stable Balancer	If the Bitcoin price increases, then the Stable Receiver sends Bitcoin to the Stable Balancer. If the Bitcoin price decreases, then the Stable Provider sends Bitcoin to the Stable Balancer.
3	Rebalance Stable Receiver and Stable Provider then Distribute Bitcoin Yield	Stable Balancer periodically sends Bitcoin to the Stable Receiver to ensure a stable Fiat balance, sends Bitcoin to the Stable Provider to ensure a stable Bitcoin balance, and distributes the remaining Bitcoin Yield to all participants based on the pre-defined yield allocation agreements.
4	Close or Splice-Out Stable Channel	Stable Receiver and Stable Provider remove Bitcoin from the Lightning Channel to either close the connection or keep it active and just splice-out liquidity.

## Bitcoin Lightning Bank - Bitcoin Growth Yield and Market Intelligence

Bitcoin is extracted from a **Stable Receiver** at the Bitcoin Growth Rate

Yield **stops** during Bitcoin stagnation to form yield **valleys**

Bitcoin is extracted from a **Stable Provider** at the Bitcoin Contraction Rate

Yield **increases** during Bitcoin expansion to form yield **peaks**

Yield **decreases** during Bitcoin contraction to form yield **cliffs**

**Bitcoin Growth Yield** is acquired by following the Bitcoin Compound Annual Growth Rate (CAGR)

**Market Intelligence** identifies opportunities to maximize returns by taking advantage of yield peaks, valleys, and cliffs

Bitcoin Growth Yield Scenario		Market Intelligence Strategy
Yield Peak	Yield increases during Bitcoin expansion	When the Bitcoin price rises to reach a yield threshold it is ideal to close the Stable Channel, buyout or sell the remaining Bitcoin, and then call the bond back for repayment. Afterward, new bonds can be issued with the yield to extract and duration terms reset. When the bank sells the remaining Bitcoin during market overperformance it frees liquidity so that it can issue new bonds then purchase Bitcoin again later during market underperformance thereby maximizing returns that leverages the Bitcoin volatility.
Yield Valley	Yield stops during Bitcoin stagnation	When the Bitcoin price stagnates then the yield is dynamically reduced or stopped entirely. If the yield returns have been underwhelming throughout an entire bond lifespan, then the bond can be extended to capitalize on future positive Bitcoin price movements or hedged with a put option to sell back the bond to the Bank. Stable Providers offer a fixed interest rate to Stable Receivers so that the yield is immune to Bitcoin price stagnation, so this is just a Bitcoin Investor concern.
Yield Cliff	Yield decreases during Bitcoin contraction	When the Bitcoin price decreases then any yield not yet distributed is given back to the Stable Receiver as well as Bitcoin is transferred from the Stable Provider to the Stable Receiver to make their fiat balance whole. When the Bitcoin rises again then Bitcoin is sent back to the Stable Provider to make their Bitcoin balance whole. If Bitcoin experiences a significant drawdown and a balance threshold is reached, then the Stable Provider must top-up their balance or risk liquidating their entire position to the Bank. If liquidated, the bank will take all the profit once Bitcoin recovers but is now on the hook for making interest payments.

Lightning Bank Products			Customer	Balance	Mechanics	Custodial	Redeemable	Yield Sources
Bitcoin Lightning Stable Bond			Fiat Investor	Stable Fiat backed by BTC	Deposited bitcoin is stabilized by an over collateralized network of Bitcoin Lightning Stable Providers	Yes	Yes, by both customer and issuer	Fixed Income from Stable Providers
Bitcoin Lightning Stable Preferred Share			Fiat Investor	Stable Fiat backed by BTC	Deposited bitcoin is stabilized by an over collateralized network of Bitcoin Lightning Stable Providers	Yes	Yes, by both customer and issuer	Fixed Income from Stable Providers
Bitcoin Lightning Stable Deposit			Bitcoin Investor	Leveraged BTC	Deposited bitcoin leveraged by a network of Bitcoin Lightning Stable Receivers	Yes	Yes, by both customer and issuer	Bitcoin Growth and Lightning Transactions
Bitcoin Lightning Stable Loan			Bitcoin Investor	Leveraged BTC	Deposited bitcoin leveraged by a network of Bitcoin Lightning Stable Receivers with the ability to borrow Bitcoin for additional leverage	Yes	Yes, by both customer and issuer	Bitcoin Growth and Lightning Transactions
Bitcoin Lightning Stable Credit Line			Bitcoin Investor	Leveraged BTC	Deposited bitcoin leveraged by a network of Bitcoin Lightning Stable Receivers with the ability to borrow USAT / USDT	Yes	Yes, by both customer and issuer	Bitcoin Growth and Lightning Transactions
Bitcoin Lightning Stable Savings			Fiat Investor	Stable Fiat backed by BTC	Deposited bitcoin is stabilized by an over collateralized network of Bitcoin Lightning Stable Providers	No	Yes, by customer only	Fixed Income from Stable Providers
			Bitcoin Investor	Leveraged BTC	Deposited bitcoin is leveraged by a network of Bitcoin Lightning Stable Receivers	No	Yes, by customer only	Bitcoin Growth and Lightning Transactions
Lightning Bank Services								
Fiat Investor	Standard	Enterprise-grade Lightning Network Stable Channel liquidity services which provide efficient USD principal balance stability coupled with high-yielding USD interest payments						
	Premium	Standard plus ultra-high yielding USD interest payments generated by locking funds and compounding interest in Bitcoin over the duration of the lock						
Bitcoin Investor	Standard	Enterprise-grade Lightning Network Stable Channel liquidity services which provide efficient BTC principal balance stability coupled with high-yielding BTC interest payments						
	Premium	Standard plus Bitcoin Drawdown Liquidation Protection. Liquidation can still occur if interest payments are not made or borrowed funds are not returned.						
	Luxury	Premium plus Bitcoin Yield Boost Loans which provide additional leverage with additional risk that the principal can be depleted quicker during Bitcoin Drawdowns so interest payment failures may trigger a liquidation event.						

## Bitcoin Lightning Credit Derivative Service Rates

Posted rates dated October 30, 2025

\* Ranges are estimated from 5 year averages of Bitcoin Growth Yield (BTC CAGR) between 20% and 40% and Bitcoin Transaction Yield at 1% (LN Routing Fees) which gradually depreciate due to loan interest payment withdrawals

\*\* Luxury service buys Bitcoin and loans it to the Bitcoin Investor at the L I T E rate then allocates to the Stable Receiver to provide a leveraged yield boost

**Lightning NAV (LNav)** = Bitcoin Transaction Yield (BiTY) generated from Lightning Network routing fees

**Credit NAV (CNav)** = Bitcoin Lending Yield (BiLY) generated from Bitcoin or Stablecoin lending interest fees

**Derivatives NAV (DNav)** = Bitcoin Growth Yield (BiGY) generated from Bitcoin Compound Annual Growth Rate

**Bonds** are non-convertible, callable, puttable, extendible and secured to the bitcoin contained as a Stable Receiver in Lightning Network channels.

**Premium Bonds** are tax-exempt zero coupons with the same annual rate in USD as **Standard Bonds** but instead compounded in Bitcoin and then is sold at maturity to provide a lump sum USD payment

**Preferred Shares** are non-convertible, callable and retractable

The **goal** is to offer the highest interest Bitcoin-backed products and services on the market to generate demand and build the world's largest distributed Bitcoin Total Value Locked (TVL) located in Lightning Network channels that dual serve as routing nodes to provide more liquidity and scalability to the Lightning Network.
